

this is the farm owned by Ian S Martin

this is a response to comments from Andris Bite and karen Cybulski  
for file C7-24

maple bush is tapped and in food production

this picture is from before Ian bought this farm  
the yellow areas are aprox 13 acres that was tile drained and put into production

rezone area

traffic from this shop is not antispated to drive much on Southgate road 22 but would generally take 71 to Grey Rd 9

Response to comments for file C7-24

This is Ian's farm after he cleaned it all up and tiled it and maximized production

please note Andris comments on power supply,

the primary source of power for this farm is solar and will stay solar for the OFDU as well which is 100% green energy, secondary and standby power will be propane, no Diesel power used here and very few OFDU,s in total that use diesel power

Ian S Martin file C7-24

response to comments

this is a response to comments from Andris Bite and karen Cybulski to try to show and explain that these farms do get farmed and to show how small an area is taken out for an OFDU and how nice they fit into a farm cluster and hardly take any land away compared to what gets cleaned up and put into production

these OFDU's are to help support and maximize production on these farms so they are viable stand alone farms
